Welcome to Devigo

The past, present & future of data management

In choosing Devigo to provide a complete outsourced solution, you have made the choice that reflects your company's needs. This document is designed to provide a single page summary that can be e-mailed internally to other decision makers within your company, to ensure they have a clear understanding of why you recommend Devigo.

Cost

We believe our contract and the technology behind it is unique. The contract is formed over your chosen term (normally reflecting a standard storage period between five and seven years), with payments due as an initial deposit and the following payments spread monthly over the period chosen. The variation according to what we believe you will digitise, measured against the actual digitisation workload is then charged/rebated each quarter. Our contract offers a level of flexibility that ensures you only pay for what you use and as a revenue based charge, is entirely allowable against taxable profits.

Security

We understand that information is the lifeblood of your business and therefore, you may wish for it not to leave your premises, that's why Devigo can come to you. All our staff are security cleared to ensure that everyone who handles your data understands the confidential nature of its contents. Once digitised, you can rest safe in the knowledge that your data is protected 24/7 with bank level encryption. Every user of the Devigo system is issued with a unique identity that determines their level of access. You and your staff can access your data securely via the Internet, from anywhere in the world, creating an incredibly powerful business tool.

No business disruption

Devigo have carefully planned our services to keep this to a minimum. We provide our solutions fully project managed from the outset, agreeing with you the most economical access to your data to ensure minimal disruption to your everyday operations. We also remove the necessity to involve key members of your staff in the implementation of our systems. Devigo will ensure that staff training requirements are completed in their entirety from day one. This allows everyone in your company to be up and running with the new data system as early as possible.

Technology proof

Once you instruct Devigo to provide your complete outsourced solution, you can rest safe in the knowledge that all your future document digitisation will be undertaken for the agreed term and you will never again be faced by the legacy backlog you have previously endured. We are constantly investing in ensuring our platform of both hardware and software is at the forefront of reliable digitisation technology, only implementing change where it brings benefit to our customers.

Quality

At Devigo, quality is an absolute priority. Our processes guarantee a consistently high standard of image across every single document we digitise, without exception. These processes exceed the standards laid out in the BSI DISC Code of Practice for Legal Admissibility and Evidential Weight of Information Stored Electronically (BIP 0008:2004). Every single document we digitise is scanned to a higher resolution than required by this BSI standard, providing you with unparalleled clarity. We only employ the latest technology, able to obtain clean images from some of the worst originals. Our team also has a thorough knowledge of the legal issues surrounding image digitisation, data protection and human rights.

A partner you can trust

Devigo's mission is to provide all of the above in a manner reflecting a level of professionalism and integrity that you should demand from the company you trust with your lifeblood of information. This is our philosophy and that's why we handle and treat your data in this manner from the moment we arrive.

**Welcome to Devigo, a trusted partner
for now and the future.**
